

### Scope

*Spatial Vision* is an interdisciplinary journal aimed at the encouragement of communication between researchers on all aspects of human and mammalian vision, including mathematical modeling and computational analysis, the biophysics of vision, the psychophysical analysis of visual processing, the study of perception and action, and the cognitive aspects of vision. Submission of theoretical and empirical papers is encouraged, as well as reviews of major topics. Theoretical contributions should be firmly based on experimental data, and mathematical arguments should be clearly presented and sufficiently illustrated to be useful to the experimentalist, with details placed in appendices. Experimental papers should be theoretically relevant. Review articles should emphasize the development of ideas in the field. Short communications and technical notes that draw attention to significant new developments or innovations in technique are also welcome, as are Commentaries by authors wishing to express their views on current issues. Special Issues dealing with a single topic will be announced frequently.

### Online Submission

Authors are now to submit their manuscript online via the Editorial Manager (EM) online submission system at [www.editorialmanager.com/sv](http://www.editorialmanager.com/sv)

Prior to submission, authors are urged to read the EM instructions available by following the above link and clicking on the 'help' icon in the top left hand menu on the page.

While submitting via the website, you will be guided stepwise through the creation and uploading of the various files and data. Authors also have the opportunity to suggest and oppose specific editors and reviewers.

Most popular formats are allowed for the initial submission, including PDF files. The final revision must include the editable word-processing file (i.e., Word or LaTeX document). Figures can be in other formats. When a Word document is uploaded as the initial submission, the system automatically generates an electronic (PDF) proof, which is then used for reviewing. All correspondence, including the editor's request for revision and final decision, will be by e-mail.

Dov Sagi - [Dov.Sagi@Weizmann.ac.il](mailto:Dov.Sagi@Weizmann.ac.il)

Adam Reeves - [Reeves@neu.edu](mailto:Reeves@neu.edu)

When submitting a manuscript, please note:

- As an obligatory step in the online submission process, the author(s) should confirm that the material has not yet been published or submitted for publication elsewhere.
- The editorial board tries to keep the reviewing process as short as possible and to inform the author of the final decision (accept/reject/revise) within two months after submission.

- The corresponding author receives proofs, which should be corrected and returned to the publisher as fast as possible. No major changes to the original manuscript are accepted at this stage. The paper will be published in the next suitable journal issue.
- A PDF file of the paper will be supplied free of charge by the publisher to the corresponding author for personal use. No free reprints are provided but author(s) may order reprints at cost by returning the order form supplied with the proofs.

### Article Format

- Contributions to *Spatial Vision* must be written in English. Pages should be numbered beginning with the title page. Lines should be 1.5 or double-spaced.  
The first page of an article should contain the title of the paper, the name(s) and address(es) of the author(s), a short title (not exceeding 50 characters, spaces included), and the name, e-mail address and postal address of the author to whom correspondence and proofs should be sent.
- Title in roman type (capitals only for the first letter and the first letters of proper words) should be as brief and informative as possible.
- Authors in roman type with capitals as normally used by the author, first name, names separated by commas and between the last two names by 'and', references to institutes and addresses as superscripts (e.g. 1), or 1,2) in ascending order).
- Institutes where the work has been done should be indicated under the authors, first letters of major words in capitals. When the authors are based at different organizations this should be indicated in superscript in front of the institute (e.g. 1Centre for Spatial Vision Sciences – corresponding to the references under 'authors').
- Each article should be accompanied by a summary or abstract of 150-200 words in English, which should mention all the principal facts and conclusions set forth in the paper. A similar abstract in another relevant language may be added, but this is not required.
- Three to eight keywords should be added.
- E-mail addresses of corresponding authors must be added, preferably as footnotes.
- Main headings in bold type (Abstract, Introduction, Material and methods, Results, Discussion, Acknowledgements, References or other variants if appropriate), capitals only for first letter of sentence and first letters proper names, separated by white lines from text. Subheadings in italic type, aligned to the left, capitals only for first letter of sentence and first letters proper names, separated by white lines from text. Sub-subheadings in roman type, indented and in italic followed by a dot and text on the same line, capitals only for first letter of sentence and first letters proper names, separated by a white line from preceding text, following text starting on next line.  
Detailed mathematical discussion should be placed in an appendix.
- Units of measurement, abbreviations and symbols should follow the international system of units (SI). Special symbols should be identified in the margin if submitted on paper.
- Equations and formulae should be numbered consecutively with Arabic numerals in parentheses on the right-hand side of the page.
- Italic type should only be used for scientific species names, words that need to be emphasized (no italics for: e.g., i.e., et al., etc., cf.) and for mathematical and statistical variables such as p, F,

U, T, N, r, but not for SD (standard deviation), SE (standard error), DF (degrees of freedom) and NS (non significant).

- Bold type should only be used in exceptional cases of extra emphasis or in some formulas.
- Capitals should only be used for first letters of sentences, first letters of proper names and first letters of specific words (e.g. tables, figures, experiments) that should be emphasized; small capitals for words that should be printed in capitals.
- Citations to the literature in the text should consist of one or two authors and the year of publication, or first author + et al. and year, totally in brackets or only the year in brackets, authors separated by 'and', author(s) and year separated by comma. Different references should be separated by semicolon, alphabetically ordered. If the list contains several references of the same author(s), extra years should be added to the first entrance of an author. Differentiate between references by the same author(s) from the same year by adding a, b, etc. Examples: (Gaston, 1977) or Gaston (1977); (McDonald et al., 2001; Wingfield, 1985; Wingfield and Hahn, 1994; Wingfield and Wada, 1989); (Silverin, 1993, 1998a; Wingfield and Hahn, 1994).
- References to tables should consist of the complete word, first letter capital (also in the middle of a sentence or in brackets) + number in Arabic numerals. Examples: Table 7 or (Table 7).
- References to figures should consist of the complete word only at the beginning of a sentence and in the figure captions; otherwise the abbreviations "Fig." or "Figs" are used.
- Abbreviations should be followed by '.' unless the abbreviation is written with the last letter of the original word at the end position (thus: i.e. – e.g. – cf. – etc. but eds – Dr – edn – Figs) – measures (such as mm cm m s l) without '.'.
- Use single quotation marks for isolated words or conceptions, double for literal quotes.
- Tables should be kept as simple as possible with at least 3 horizontal lines and additional lines if appropriate, data ordered in a convenient way. The title should give all details that are needed to understand the table except obvious footnotes.
- Illustrations must be provided in a digital format. Figures should be drawn for reproduction within the type page (118 × 180 mm). Figures can be printed in color but are subject to charges. Digital color figures should be in an original TIF or EPS file and in full color (i.e., CMYK), and with a minimal resolution of 300 dpi. Lettering size should be the same for all figures and be matched with information density. Diagrams, maps, drawings, charts and photographs should be free of charge and copyright.
- Figure captions should not be attached to the figures but should be typewritten on separate sheets and attached to the end of the manuscript.

## References

The Harvard system should be used for the references. In this system, names and dates are given in the body of the text and an alphabetical list of references at the end of the manuscript.

References in the text should give the author's surname with the year of publication in parentheses. When reference is made to a work by two authors, both names should be given; references to works by more than two authors should give the name of the first author, followed by *et al.*, e.g. Smith *et al.* (1973). If several papers by the same author(s) in the same year are cited, a, b, c, etc. should be placed after the year of publication, e.g. Smith and Jones (1982a, b).

## List of references

### Paper in journals:

Pavani, F., Boscagli, I., Benvenuti, F., Rabuffetti, M. and Farne, A. (1999). Are perception and action affected differently by the Titchener circles illusion? *Exper. Brain Res.* **127**, 95–101.

### Book:

Milner, A. D. and Goodale, M. A. (1995). *The Visual Brain in Action*. Oxford University Press, Oxford, UK.

### In book:

Pinna, B. and Reeves, A. (2006). Lighting, backlighting and watercolor illusions and the laws of figurality, in: *Color, Line, and Space. The Neuroscience of Spatio-Chromatic Vision*, B. Pinna (Ed.), Spatial Vision Perspectives, Vol. 1, pp. 239-271, Brill, Leiden, The Netherlands.

### Proceedings of conferences:

De Grave, D., Brenner, E. and Smeets, J. (2002). Pointing towards the Brentano illusion, in: *VSS 2<sup>nd</sup> Annual Meeting*, Sarasota, Florida, Abstract 726, p. 247.

### PhD (MSc, MD, etc.) Thesis:

Vighetto, A. (1980). *Etude neuropsychologique et psychophysique de l'ataxie optique*, Thèse médecine, Lyon.

If a publication is in press, the reference should be made as complete as possible, stating the name of the journal and adding “in press”.

The list of references should be typed with double spacing, and in alphabetical order of the first author's name. When a number of publications by the same author are cited the order should be (1) single author references in date order, (2) two author references in alphabetical order of the second author, and (3) *et al.* references in date order.

## Copyright

It is a fundamental condition that submitted manuscripts have not been published and will not be simultaneously submitted or published elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the publisher if and when the article is accepted for publication. The use of general descriptive names, trade marks, etc., in this publication, even if the former are not specifically identified, is not to be taken as a sign that such names are exempt from the relevant protective Instructions to Authors laws and regulations and may accordingly be used freely by anyone.
